

REM-B HYDRAULICS, YOUR PARTNER FOR REMANUFACTURED HYDRAULIC UNITS

What is Remanufacturing?

Genuine used quality parts are collected and thoroughly inspected. Only the best parts are then selected for Remanufacturing. These used genuine parts are then cleaned, stripped, resurfaced and/or shaped. Then the complete units are assembled out of these parts.

So every part in your unit is genuine! Finally, these remanufactured units or components are thoroughly tested to ensure they adhere to OE specifications.

This process results in remanufactured hydraulic pumps, motors and components that meet the same OE specifications as new ones. Do not confuse 'remanufactured' with 'reconditioned', 'repaired' or 'rebuilt' equipment. In contrast to these, **remanufactured equipment is entirely genuine and look, function and feel literally as good as new.**

All our RM*-units carry a one-year warranty and are tested to OE specifications.

REM-B HYDRAULICS is a premier supplier of remanufactured Bosch Rexroth A10V(S)O pumps and of Vickers, Racine and Denison remanufactured pumps, motors, valves and replacement parts. In the future more products and brands will follow.

For a full overview of all our products & services: www.remb.be

- ▶ Everything genuine – no copies
- ▶ Fast response and fast delivery
- ▶ High quality – tested to OE specifications
- ▶ 1 Year factory warranty

WE CARE ABOUT HYDRAULICS

** you can recognize our Remanufactured products by the RM-prefix in the description on our quotations, order confirmations, delivery notes & invoices.*
